

OBJECTIVE

Forward thinking Software Developer specialized in Python backend environments and Java full-stack architectures. Proven track record in building and optimizing LLM-integrated platforms and real-time interactive tools. Passionate about applying modern software methodologies to drive scalable product solutions

WORK EXPERIENCE

Software Developer | Cognifyz Technologies (Intern) (April 2026)

- Designed six Python console applications utilizing data structures and automation. Developed a persistent CRUD data tool and a multi-threaded HTML web scraper.
- Created resilient utility scripts optimized with strict input sanitization

Digital Marketing and Web Development | Layercodes Technology (Intern) (Dec 2024 - Jan 2025)

- Gained hands on experience in digital marketing and web development.
- Built a professional understanding of domain, server infrastructure, cloud systems,and AI applications.

Web Development | Cloud Technologies | Pondicherry (Intern) (Jun 2024)

- Acquired hands on experience in web development, specializing in front-end designs,
- Implementation frameworks, and the integration of cloud technologies within a web environment.

SKILLS

Languages: Python, Java, SQL, C, Node.js, Frontend Tools (HTML5, CSS3, React)
Frameworks: React, Flask, FastAPI, NumPy, TensorFlow, Scikit learn, Gen AI & ML, LLM Model, OpenCV
Platforms: MySQL, PostgreSQL, VS Code, Eclipse, Oracle, UI/UX (Figma), Wordpress
Certifications: CCNA 1,2 (Cisco), Python (NPTEL), AI and ML(SkillSoft), AWS Certified Developer (Infosys)

PROJECTS

StyleAI - AI Powered Virtual Fashion Try-On (June 2026)

- Developed and built an AI-powered virtual fashion try-on platform using FastAPI, MediaPipe, and OpenCV.
- Implemented real-time body pose detection and garment alignment pipelines.
- Managed data storage and system retrieval using PostgreSQL.

BatterKart - Full-Stack E- Commerce Platform (April 2026)

- Developed a full-stack homemade batter and food application using Spring Boot, React, and PostgreSQL.
- Created secure RESTful APIs for shopping carts and order management.
- Designed a clean, scalable layered architecture for the web platform.

Empathai - Multimodal Emotion Recognition for Automated Elderly Emergency Response System (Dec 2025)

- Created an AI powered elderly care voice assistant using Whisper and Ollama Phi-3. to generate empathetic responses, and Integrated CNN-LSTM models for speech, emotion, and context recognition.
- Deployed emergency alert modules across platforms using Flutter and Python.

YouTube Transcript Summarizer

- Developed a web application using Python and Flask framework that fetches YouTube transcripts via RESTful APIs and utilizes advanced NLP techniques to generate concise text summaries.

EDUCATION

Bachelor of Technology (B.Tech) in Information Technology (2022 - 2026)
IFET College of Engineering, Villupuram | Major: Information Technology
CGPA: 8.4

ADDITIONAL INFORMATION & ACTIVITIES

- Awarded 1st Prize in a Regional Mini-Project Competition for innovative software design.
- Recognized in the Top 15 nationwide in the GenNext project expo, demonstrating exceptional problem-solving, live coding, and technical presentation skills.
